STONE IS THE REAL DEAL

The range of options available in today's market for floor and wall surfaces is endless, but natural stone is the real deal. There are many manmade pretenders, but natural stone is recognised all around the world as the material of choice in high quality residential and commercial projects due to its unique beauty and the timelessness, quality and prestige that a surface in natural stone conveys.

Most of the world's iconic buildings and wonders of the world will incorporate natural stone that remain key components of their longevity, charm and individuality.

The portfolio of stones available from Strata [part of the Stone Age Group of companies], have been carefully selected to give our clients a range of finishes and textures to complement many different styles and tastes, and to put their own personal signature on their home, or project, whether it be for interior or exterior application. Our portfolio is different because we combine the

manufacturing processes available with 21st century technology with our team of stone masons, who work the surfaces and edges of some of our products in our Heritage collection to create more authentic products indicative of many regions around the UK and their unique characteristics.

In addition we are able to offer a complete customised service for clients where we can develop intricate shapes and textures or inlay stone with other materials such as wood, metal, glass or ceramic.

I hope this brief introduction to our collections is helpful in outlining a few of the options available from our distribution centre in Ipswich, and if we can be of any further assistance in your selection process please do not hesitate to contact our team.

Sanjeev Agrawal
Group Chief Executive

WHO ARE WE?

Strata is part of the Stoneage Group of companies. We manage and extract a selection of Indian sandstones, limestones and marbles from our own quarries and from those of strategic partners. The international selection of natural stone materials available from Strata means that we also use our expertise and experience to select only the finest material from other quarries around the world.

As quarryers and manufacturers of many of the natural stones in our interiors portfolio, it is our deep understanding of the raw material which will remain the core of the selection process we use to collate the natural stones that form part of Strata Interiors. All natural stone sourced is from sustainable and ethical operators, and comply with European CE standards, and US ASTM criteria.

WHY IS THIS IMPORTANT?

The majority of the non-indigenous natural stone supplied is offered to the UK market through wholesalers. At Strata we offer our clients the confidence that emanates from knowing we are the source for the raw material and manufacturer of the majority of the products that we offer. This guarantees our products are manufactured to the highest standards, in accordance with the harmonised European standards for manufacturing compliance and material sourcing, and is embraced by the CE mark as standard

on our products. Strata customers can be assured that our stone is sourced from quarries that are fully compliant with ethical trading standards, in line with our processing operations. This is validated by the fact that all our documentation, procedures and practises are independently audited and comply with ISO9001:2008 and SA8000:2008, by TUV Rheinland, a leading international body for the certification of safety and quality in products, processes and management systems.

**STON
AG**

OPERATIONS

Our factories incorporate machinery that enable us to manufacture a variety of finishes and textures, from the traditional to the very contemporary in styles. Using CNC and water jet cutting technology we can also offer our clients custom solutions to meet the specifics of any project.

AN INTRODUCTION TO OUR PRODUCTS

Natural stone is recognised as the material of choice in residential and commercial projects all over the world due to the unique beauty of the material, and the unspoken statement of timelessness, quality and prestige that it conveys. At Strata our portfolio of stone includes many finishes to

enable different styles and effects to be achieved. Some examples of these are highlighted below, but if you are looking for something unique let us know, and our Design and Technology team will work with you to achieve your objective.

QUALITY ASSURANCE

Quality is paramount, so we ensure that only the best quality rock is selected for use in the manufacture of Strata products. This means that our customers receive floor and wall products that are manufactured from the best quality sandstone, limestone and marbles and are checked at each key stage of the manufacturing process. All our products comply with the CE mark.

MATERIALS

LIMESTONE

Limestone is a sedimentary rock formed by the consolidation of sediments, seashells and other organic matter, and is a popular material for interior natural stones. Each Limestone have specific characteristic colours and marketing reflecting their unique quarry of origin. Limestone is an acid-sensitive material and so care should be taken to use the correct products when cleaning.

SANDSTONE

Sandstone is a coarse-grained sedimentary rock formed by

compressed sand deposited by water or wind. This is available in a variety of finishes, and is often suitable for internal and external use. Sandstone is a hard but porous stone that, if being sealed, requires thorough impregnation with suitable sealants.

MARBLE PORCELAIN BACKED

Marble porcelain backed tile is an alternative to solid stone tile. It is real marble with porcelain bonded onto the back side of the tile. Tiles come 12mm thick with a 3mm natural marble.

Advantages are;

- Can be used in more environments than full body stone
- Polished and honed finishes
- Tile weighs 50% less than the equivalent full body tile
- Easier to install
- Coloured adhesives don't bleed through
- Less transport costs
- Considerably more cost effective than the equivalent full body Marble

YOU SHOULD KNOW

A sandstone that brings the interior and exterior spaces together, and where its subtle blend of cream and grey tones are tumbled, aged, polished and brushed to provide the authentic undulations of the natural stone often found in the Cotswolds. The riven surface of the material is "softened" through a variety of hand chiselling and tumbling/ polishing techniques employed during the production process.

FARMCOTE

SANDSTONE

FARMCOTE
sandstone

FINISH	EDGE	VARIATIONS	SIZES	USE & SUITABILITY
Tumbled and Brushed	Cushioned	Medium	500 X FL X 20 mm	<div><div>Interior flooring</div><div>Exterior paving</div></div>

NOTE
All products calibrated to +/- 2mm thickness. Other sizes and thickness are available on request. Contact our Customer Services for further information. FL = Free Length.

YOU SHOULD KNOW

The autumn shades evident in the subtle colours of Farmcote are reminiscent of old traditional English flooring stones. The tumbling, hand texturing, and heavy brushing techniques employed to this sandstone creates the a finish that grinds down the natural riven texture of the material enabling a more even surface for use with interior and exterior furniture.

HEMBURY

SANDSTONE

YOU SHOULD KNOW

Hembury provides the brown and grey tones common with traditional English flagstones.

HINTS & TIPS FOR LAYING FLOOR TILES

- Natural stone tiles are all slightly different and it is perfectly normal to find a variance of colours, markings, thickness and textures. This is a natural feature of these types of material and means that every room is unique.
- Due to the nature of the manufacturing process, in some cases there can be a very slight 'bow' along the length of larger tiles (60cm or larger). If you are considering laying your tiles in an off-set "brick" pattern it is best to stagger the tile by only a third or less rather than by staggering by half a tile. This will minimise the effect of the bowing on the finished look.
- It is important to consider a balanced design and allows for manageable cuts. For example, if you are tiling a complete wall, allow for a similar size of cut tile in each corner as well as considering features such as windows - these should be centred in the design.
- The layout of your tiles will affect the finished look enormously so it is worth some thought ahead of buying your tiles. You can stagger joins, or set tiles diagonally for a diamond-effect pattern, or use inlay designs for a strong pattern. Whichever you choose, tiles are laid in the same way; just adjust the start position accordingly.
- Do not plan to leave small slivers at corners as they are difficult to cut. The closer a cut is to a half tile, the easier it is to make.
- If you are starting at ground level, you cannot guarantee the floor is level. Attach a level batten and work from this to achieve a balanced design. When tiling off a bath or shower tray rim, check first that the edges are level, but these are normally suitable potential starting points for tile rows.
- When you measure the dimensions of a design, remember to allow for grout gaps. For wall tiling, these are normally 2-3mm.
- Plastered wall surfaces will support tile weights up to around 20Kg/sq.m. Therefore, rendered or cement board wall surfaces, which support tile weights of around 40Kg/sq.m, are more suitable for large (heavy) format tiles. Adhesive weight must also be included in your square metre calculations.
- All photographs depicted in this brochure should only be used as an approximate guide in terms of finished appearance.
- Viewing actual samples or products in-situ is highly recommended prior to order placement.
- All tiles should be graded upon receipt to ensure they blend harmoniously within the overall design scheme adopted.
- They should also be graded in terms of size and thickness, as all dimensions listed are nominal and small variations can occur. The thickest tiles should be installed first to establish the required finished floor level, thereby allowing thinner tiles to be bedded up with adhesive.
- Please note that some products may arrive damp, which often changes the appearance of the stone by making tiles look darker.
- It is essential that tiles are completely dry prior to installation so that any colour variations can be assessed.
- A 10% allowance for wastage that can occur in transportation, site handling and cutting should be made at the time of order.
- Materials should be inspected and unpacked carefully, then cleaned prior to fixing as they may feature a residue from the production process.
- All natural stone tiles are to some extent porous and sealing them with an appropriate product is highly recommended in order to make maintenance and routine cleaning much easier. Please consult sealant Manufacturer for advice.

PATTERN GUIDELINES

GRAND OPUS

A 871 x 580mm
B 580 x 580mm
C 580 x 288mm
D 288 x 288mm

OPUS

A 600 x 400mm
B 400 x 400mm
C 400 x 200mm
D 200 x 200mm

RANDOM LENGTHS PATTERN

400mm x Random Lengths
500mm x Random Lengths
560mm x Random Lengths
600mm x Random Lengths

Pattern can be used for set square tile for example 600 x 600, 600 x 400mm

YOU SHOULD KNOW

All photographs depicted in this brochure should only be used as an approximate guide in terms of finished appearance. Viewing actual samples or products in-situ is highly recommended prior to order placement.

A laying format for tiles, where the width of the stone is static i.e. 400mm or 600mm and the lengths of the tiles vary randomly or are a mix of a minimum of two different lengths, offering a look which is reminiscent of traditional stone floors. Please see Stone Layouts for available stones.

ESSENTIAL ACCESSORIES

A range of adhesives, gouts, and sealants to help with the installation of your natural stone and available for dispatch with your delivery.

PRO RAPID SET ADHESIVE

Professional Rapid Set Flex is a specially formulated, flexible, non-slip, fast setting, cement based adhesive for natural stone. It is suitable for beds of 3–12mm, interior, exterior, floor and wall applications.

- SUITABLE FOR USE WITH ALL NATURAL STONE AND PORCELAIN BACKED TILES
- FOR USE IN INTERIOR FLOOR AND WALL APPLICATION
- RAPID SET ALLOWING GROUTING AFTER 3 HOURS
- WHITE IN COLOUR

COLOURFAST TILE GROUT

Larsen Professional stain resistant wide jointing compound is a specially formulated, flexible, rapid setting tile grout for natural stone. This advanced formulation uses Colourfast Technology to ensure uniform joint colour, free from efflorescence, which is suitable for use as a flexible wall and floor grout.

- JOINT WIDTH 2-20 mm
- FLEXIBLE
- STAIN RESISTANT
- MOULD RESISTANT
- WATER RESISTANT
- EASY TO APPLY
- FAST SET

Packaging: 10kg
Standard Colours:
Ivory / beige / grey

Refer to data sheets available through our customer service department on coverage which is dependent upon grout width and depth.

CARE & MAINTENANCE OF YOUR STONE ^{PART 1}

The range of sealants we have selected is specifically designed to be easily applied and to enhance the natural colours and patterning of natural stone.

STONECTECT STONE SEALANTS

Stonetect' (R), provides a highly effective protective barrier against water and oil based staining, staining and attack from almost all food and drink and garden debris, [and increases wear resistance], helping your stone to always look great, and simplifies general cleaning and maintenance.

The Stonetect product soaks deeply into the stone, minimising the penetration of water and all other common liquids, resisting staining from most domestic spillages and garden debris, giving years of protection and easy maintenance from the one initial application.

YOU SHOULD KNOW

When no enhancement of natural colour and character is required, the product SwiftSeal Ultra gives good resistance to water and oil based staining and facilitates cleaning; it requires reapplication at regular but infrequent intervals.

Refer to Strata customer service for more information.

CARE & MAINTENANCE OF YOUR STONE PART 2

The matrix below gives an indication of the enhancement to the colour likely with each stone type, but given the unique markings and character of each stone in our portfolio we recommend that a sample is always prepared first before installation.

MADE TO ORDER SERVICE

Our unique knowledge and understanding of the material we work with allows us to offer our clients a total customised solution for shaping natural stone.

STRATA MOTIEFS

The pictures below provide example of how simple walling veneers as seen in our walling and cladding section can be developed to include any type of 3D shapes and patterns. Strata Motifs are example of this to inspire and provoke the imagination.

WHAT YOU NEED TO DO

Choose your stone, the pattern, the texture, the shape of design you want.

We will price the concept and give you a lead time as to when this will be ready.

We can also inlay METAL, GLASS, WOOD, CERAMIC, PATTERNS, OR SIGNATURES, into most natural stones to form unique personalised features in your interior or exterior application.

Alternatively we can manufacture specific unique shapes and thicknesses such as for swimming pools or specialist architectural details.

CUSTOMER SERVICES

All our interior natural stone products are stocked and stored at our 1.5 acre site dedicated to interior natural stone products at Ipswich.

Our customers can order any quantity of the stones that we stock and distribute throughout the UK and Europe from our Ipswich Distribution Centre.

DELIVERY

Customers will be contacted to arrange a specific date for delivery.

Most deliveries take place between the hours of 9.00am and 5.00pm Monday – Friday, except Bank Holidays.

Orders are packed in either wooden crates or on pallets.

It is important to notify Strata Stones at the time of order of any restrictions that may exist relating to site access.

Deliveries will be placed, at the driver's discretion, at the nearest safe point to the property/site, which may be on a drive or kerb.

Drivers are not insured to help offload deliveries by hand, so it is essential for the customer to arrange for a responsible individual/s to be present.

All orders must be examined on delivery. In the rare event of any shortages, damages or other discrepancies, these must be noted on the delivery note and reported within 24 hours.

Photographic evidence will be required of the material within the crate to substantiate any claim.

Care should be taking when unpacking all stone tiles, as spacers may need to be removed from the packaging before the tiles are removed.

Tiles should always be stacked and stored vertically (on back edge) and not on a hard surface as this can cause unnecessary chipping.
