Ceramic

Lightweight and easy to clean. Unless stated otherwise, our ceramic tiles are suitable for use on **walls only**.

Unless stated otherwise, it is not advised you use our ceramic tiles in outdoor areas unless you are willing to apply water-proofing treatments.

Cleaning instruction:

Ceramic tiles can be cleaned with a non-abrasive, soap-free cleaning solution and rinsed or wiped clean with water.

Porcelain

All porcelain floor tiles (excluding 2cm outdoor pavers) can be used on both **wall and floor**, providing substrate is suitable for the weight of the tile including the adhesive.

Some porcelain tiles thinner than 2cm can be used outdoors if they have the correct slip, breakage and frost resistance ratings. For these tiles, your tiler must ensure these tiles are laid on a solid concrete base and there are no air pockets.

Cleaning instruction:

Unless stated otherwise, porcelain tiles can be cleaned using a non-abrasive mild cleaning fluid after being swept/ brushed clean.

2cm Porcelain

Suitable for use on **outdoor flooring only**, all of our 2cm porcelain tiles are non-porous and are suitable for laying on level surfaces such as concrete, sand, gravel and grass. For the best results, a 4-6” compacted gravel base is recommended.

Because they are twice as thick as your regular indoor porcelain tile, our 2cm outdoor pavers have double the breakage strength and impact resistance.

Each of our 2cm porcelain tiles has a slip rating of R11 and up, making them slip resistant even when wet.

Cleaning instruction:

After pulling any weeds and sweeping away any loose dirt, outdoor pavers can be cleaned using mild non acidic cleaning solution that is non abrasive. Jet washing is also a suitable method of cleaning and won’t cause the colour of your outdoor tile to fade.

All tiles can be prone to “bowing” caused during the firing process. We can confirm that any tile supplied complies with European standards and tolerances.

Thorough checks are conducted prior to shipping and upon arrival in our UK warehouse. You must always ensure you are happy with the finish of your tiles before laying.

Slip resistance and breakage strength must always be taken into consideration when making tile choices for wet and commercial areas.

For polished tiles, there are now slip resistance treatments readily available on the market if required.
